Cuisine.AI

Getting started with Cuisine.AI

Set up your restaurant in an afternoon: account, fridges, team, first invoices.

1. Create your restaurant

Sign up with the restaurant name, an email, a password and an admin PIN of 4 to 6 digits.

2. Add your equipment

In Settings, add each fridge, freezer, hot cabinet and fryer with its temperature limits.

3. Add your team

Add the names of your staff and their team (kitchen, dining room). They will pick their name on the tablet.

4. Scan your first invoices

Your products, suppliers and prices are created from them: no catalogue to type.

5. Set up the daily checklists

Create the opening, service and closing checklists for each team, with the time they must be done by.
